EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

This application is in condition for allowance except for the presence of claims 1-27 and 43 directed to Group I non-elected without traverse. Accordingly, claims 1-27 and 43 been cancelled.

The application has been amended as follows:

Claims 1-27 and 43 (Canceled)

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 21 October 2010 has been entered.

Allowable Subject Matter

Claims 28-42, 44 and 45 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art fails to teach or reasonably suggest, along with ALL other claimed limitations, an apparatus for determining depth and concentration of a fluorophore in a turbid medium comprised within an object, said apparatus comprising: a light source, optically coupled to a source channel and said object, to inject light in said object at a desired point and excitation wavelength;

at least one detector channel, optically coupled to a photon detector and said object, in a back reflection geometry relative to said source channel, to acquire at least one temporal point spread function from a desired point of said object;

a means for spatially positioning said object relative to said channels;

a depth calculator for calculating the depth of the fluorophore on the basis of a time t_{\max} corresponding to *a maximum of the temporal point spread function*; and

a concentration calculator for calculating the concentration of the fluorophore based on the depth and on *an intensity of the temporal point spread function*.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fortier et al. US 2008/0312879 teaches the utility of using a temporal point spread function (tpsf) in order to determine the optical properties of detected fluorescence measurements, but the teachings do not qualify as prior art.

Ma US 2009/0216457 teaches that fluorescence intensity may correspond to concentration (¶0031) and that by using a tpsf the concentration of a fluorescence signal emitted by an object can be determined (¶0036). However the teachings in Ma do not qualify as prior art.
